Press Release July 1<sup>st</sup>, 2010

### **Compounding Solutions Expands to 50,000 sq ft Facility**

Compounding Solutions is a specialty compounder for the medical industry. The company compounds polyolefins to PEEK, and every plastic in between, with a working knowledge of typical fillers (radiopacifiers), additives, and colorants used in the medical industry. Compounding Solutions was founded in 1999 in a 10,000 square foot facility with 2 compounding lines and 3 employees. Today they have outgrown their current capacity with 34 employees, and 7 compounding lines housed in a 20,000 square foot facility.

On July 1<sup>st</sup>, 2010 Compounding Solutions broke ground on a 30,000 square foot addition at its headquarters. Improvements in the expansion will include new office space, new shipping/receiving area, a temperature/humidity controlled lab, and a fire wall between the existing facility and the future one for any unforeseen circumstances. Compounding Solutions' most notable improvement will be a ~7,000 square foot temperature and humidity controlled "white room" for all medical compound production.

Compounding Solutions continues to keep up with the increasingly stringent quality guidelines and has a desire to stay on the forefront of technology. Compounding Solutions has invested in a "white room" to provide its customers with the best medical compounding. The new "white room" will be able to house 6-8 compounding lines depending on their size. All employees will abide by clean room standards.

Projected completion of the new 30,000 square foot facility is December 2010; once finished Compounding Solutions will have the largest clean room quality production in the industry. Compounding Solutions is located at 258 Goddard Rd, Lewiston, Maine 04240, and can be reached at (207) 777-1122.
